

Things that could be improved upon in Joey's program:

- Revamp "Reports" Section
 - Split the "reports" section into two: Daily and Lifetime
 - Each are split into four sections: Date of purchase, Receipt Number, Items Purchased, and Price.
 - Implement real-time tracking of days and purchases
 - An "end day" button, which resets the system for a new day.
 - All the "Daily" purchases are moved to the "Lifetime" column, then the "Daily" column is wiped.
 - When a new day begins, all stocks of items, services, etc., should be reentered
- An "Employees" section to track employees clocking in/out and their paychecks
- Small improvements (Could be done by anyone):
 - Add lists of services and customers for service scheduling {for Services}
 - Proper scheduling inputs/times {for Services}
 - Renaming/Rewriting elements for clarity (Headers, error messages, etc.)
 - Variable tax rates (if that's a real-life thing) {for Store}
 - If an animal is sold, it should be immutable. {for Animals}
 - Exchanging "True" and "False" for "Yes" and "No"
